

FOR IMMEDIATE RELEASE

THERMARK MOVES TO NEW FACILITY IN IRVINE
Growing business necessitates move

Irvine (Nov 15, 2007) – In late November, TherMark Holdings, Inc., the leading developer of laser bonding technology and materials, moved to an expanded new facility in Irvine CA. The new location was in response to a growing business that required additional space and equipment to meet future customer needs.

The facility includes expanded warehouse space ensuring adequate inventory coverage, particularly for West Coast customers. In addition, a new applications lab was constructed which includes 2 lasers, a material application area and enhanced analytical equipment. The lab is designed to better support the numerous customer marking samples the lab has to handle.

TherMark will continue to operate the Butler, PA facility providing next day shipping, technical support and coverage primarily to East Coast customers.

About TherMark Holdings, Inc.

Founded in 1996, TherMark has grown to be the expert in laser marking technology. TherMark's patented laser bonding process quickly produces permanent, high-contrast, high-resolution marks (for custom text, identification, logos, designs, etc.), in an assortment of colors, on a variety of surfaces including metals, ceramics, glass, crystal, hard plastics, marble, granite and stone. Since its inception, the company has diligently worked to improve its laser bonding technology and products on an ongoing basis. TherMark has expanded its capabilities to serve a global audience across a broad spectrum of industries including awards and recognition; signage; medical and surgical instruments; automotive; home appliances and décor; manufacturing; and aviation and aerospace. For more information on TherMark's laser bonding technology and products, visit www.thermark.com.
