

FOR IMMEDIATE RELEASE

THERMARK ANNOUNCES NEW ADDITION TO ENGINEERING TEAM

Irvine - (Dec 1, 2007) – TherMark Holdings, Inc., a leading developer of laser bonding technology and materials, has named **Hrant Seferyan, PhD** as its new Applications Engineering Manager.

Seferyan comes to TherMark from UC Irvine where as a graduate researcher he was recently awarded a PhD in Chemical and Material Physics. His prior experience in both chemistry and laser physics are an ideal fit with TherMark’s laser bonding technology. In his new position, Seferyan will manage the applications engineering laboratory, developing marking processes for TherMark’s customer base. In addition to these duties, he will also be supporting continued research and development into new materials and processes for laser bonding.

Joel Assaraf, TherMark’s president and chief operating officer said, “We’re fortunate to add an individual with such relevant technical experience to our engineering team and one who can help us achieve both applications engineering and product development goals”.

About TherMark Holdings, Inc.

Founded in 1996, TherMark has grown to be the expert in laser marking technology. TherMark’s patented laser bonding process quickly produces permanent, high-contrast, high-resolution marks (for custom text, identification, logos, designs, etc.), in an assortment of colors, on a variety of surfaces including metals, ceramics, glass, crystal, hard plastics, marble, granite and stone. Since its inception, the company has diligently worked to improve its laser bonding technology and products on an ongoing basis. TherMark has expanded its capabilities to serve a global audience across a broad spectrum of industries including awards and recognition; signage; medical and surgical instruments; automotive; home appliances and décor; manufacturing; and aviation and aerospace. For more information on TherMark’s laser bonding technology and products, visit www.thermark.com.
